

Make a clear decision about where to use AI.

The study reviews your everyday systems and processes, then examines two or three agreed areas from start to finish. It sets out where AI can create value, what implementation would require and the right route forward.

What the board receives

A clear recommendation

What to prioritise, what should wait and why.

The commercial assessment

The evidence, costs, benefits and assumptions behind the decision.

A delivery and training brief

The systems, information, people, checks and support needed to make the change work.

A practical action plan

The sequence, responsibilities and decisions needed to move forward.

The report comes with an editable calculations and requirements workbook, so your own team can check and rework the figures.

Useful with us or without us

Use the findings to brief your own team, compare providers or continue with Built Logic. You do not have to commission implementation from us.

Brief your own team

How the study runs

Before the visit

We agree the areas to assess and the people to involve. Your team supplies record exports for those areas.

One day on site

Interviews, a walkthrough of your systems and timed checks of the work.

The report

Handling times come from the timestamps in your exports, checked against what we observed on the day.

Investment

£2,000 + VAT

A £500 deposit books the study. The £1,500 balance is due when the report is delivered.

Pay by card, invoice or purchase order.

What we need from you

- A sponsor for the study and the people who run the selected areas.
- The records for those areas. We agree the information needed before you commit.
- We do not ask for unrestricted access by default.
- How we protect your data is set out at builtlogic.ai/data-protection.

What the study does not do

- It is an assessment only. No prototypes, builds, integrations or live configuration form part of the study.
- It does not promise a quantified return. It models the value and shows the assumptions behind every figure.

Take the next step

Tell us the priority, the decision you need to make and what the study would need to establish. We confirm scope and fit before anything is booked.
